

problem 1

**Write a c code that will ask the user
to enter a character then print it and
find ASCII value of this character
Then print it**

A character variable holds ASCII value (an integer number between 0 and 127) rather than that character itself in C programming. That value is known as ASCII value.

expected output:

```
C:\Windows\System32\cmd.exe
Microsoft Windows [Version 6.3.9600]
(c) 2013 Microsoft Corporation. All rights reserved.

E:\imt school\c pool\p1>gcc main.c

E:\imt school\c pool\p1>a.exe
Enter a character: i
ASCII value of i = 105
E:\imt school\c pool\p1>
```
