problem 1

My Café wants you to write a program to take orders from the Internet. Your program asks for the item, its price, and if overnight shipping is wanted. Regular shipping for items under $10 is $2.00; for items $10 or more shipping is $3.00. For overnight delivery add $5.00

output:

```
Microsoft Windows [Version 6.3.9600]
(c) 2013 Microsoft Corporation. All rights reserved.

E:\imt school\c pool\p76>gcc main.c

E:\imt school\c pool\p76>a.exe
Enter the item name or description: pepsi
Enter the price ($): 5
Overnight delivery (0 = No, 1 =Yes)?: 1
Invoice (in $):
pepsi                                 5.00
shipping                              7.00
total                                12.00
More item? -1 to stop, any number to continue:
```
