# problem 4

Write a program that allows the user to enter students' names followed by their test scores and outputs the following information (assume that maximum number of students is 50):

a. The average score.

b. Names of all students whose test scores are below the average, with an appropriate message.

c. Highest test score and the name of all students having the highest score

expected output:

```
C:\Windows\System32\cmd.exe

E:\imt school\c pool\p84>a.exe
Enter student name: ali
Enter student score: 50
More data? -1 to stop, others to continue: 0
Enter student name: mohamed
Enter student score: 60
More data? -1 to stop, others to continue: -1

================REPORT==================
Student Name      Score
------------      -----

ali               50.00
mohamed           60.00

The number of student is 2
The average score for this class is 55.00
